DSM TYPE QSPL

Easy Wrap Spool Tie with pad

DSM Easy Wrap Spool Ties are designed to be used to attach aluminum based conductors with diameters up to 0.968" to NEMA/ANSI Class 53-1, 53-3 and 53-3 spool insulators with 1-3/4" neck diameters. For NEMA/ANSI class 53-4 and 53-4 which have 2-7/8" neck diameters use DSM Side Ties.

Each DSM Easy Wrap Spool Tie is fitted with an elastomer tie pad which protects bare conductors and the insulators from abrasion. This pad can be removed when the Spool Tie is to be used with jacketed conductors.

The color code identifies the proper conductor size.

The conductor should always rest in the preferred insulator groove independent of the tie.

Resiliency: DSM Easy Wrap Spool Ties have the resiliency to allow some longitudinal displacement of the conductor in the event of an unbalanced load caused by a broken conductor.

Tapping over the applied legs of a DSM Easy Wrap Spool Tie is not recommended.
